parla.common.parray.memory.
MultiDeviceBuffer.set_by
_global_slices

parla.common.parray.memory.
MultiDeviceBuffer.map_local_slices

```
graph LR; A["parla.common.parray.memory.  
MultiDeviceBuffer.get_by  
_global_slices"] --> C["parla.common.parray.memory.  
MultiDeviceBuffer.map_local_slices"]; B["parla.common.parray.memory.  
MultiDeviceBuffer.set_by  
_global_slices"] --> C;
```

The diagram illustrates a mapping or dependency relationship. On the left, two white rectangular boxes represent source functions: 'parla.common.parray.memory.MultiDeviceBuffer.get_by_global_slices' (top) and 'parla.common.parray.memory.MultiDeviceBuffer.set_by_global_slices' (bottom). On the right, a gray rectangular box represents the target function: 'parla.common.parray.memory.MultiDeviceBuffer.map_local_slices'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both source functions are mapped to or used by the target function.
